User guide

How to use the big screen, the workshop and the phone pages.

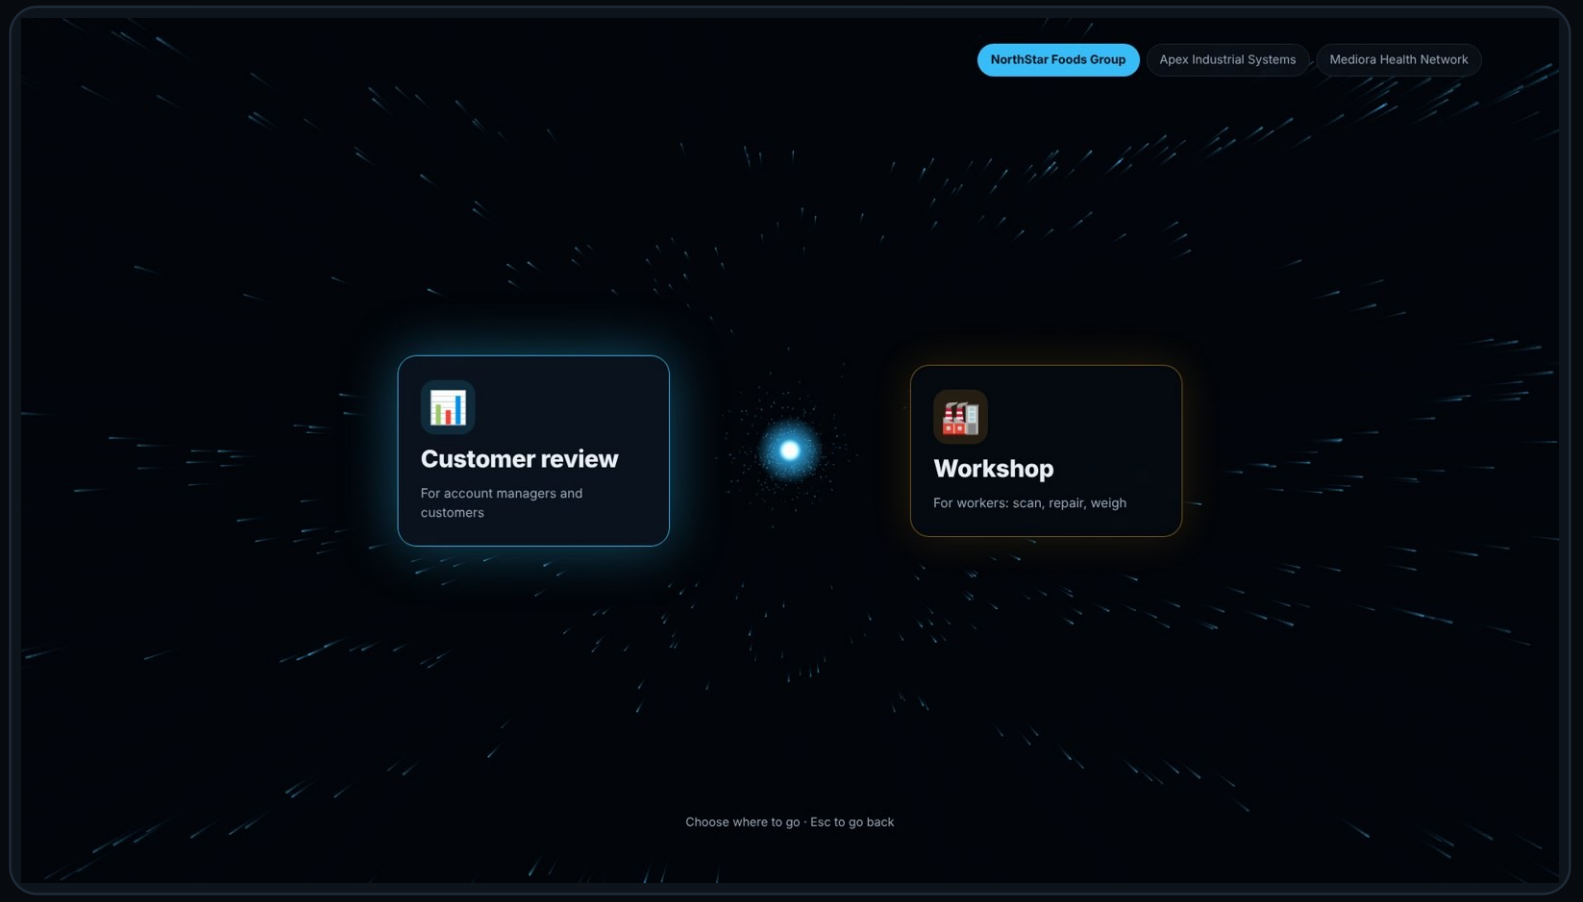

📊 **Account managers:** show the review to a customer

🏭 **Workers:** scan, repair, write off and weigh packages

Since AI Hackathon 2026 · Lindström challenge · Felix Liu

Start: tap the screen and choose a door

1. **Wait for the moving dots**

   This is the start screen. Every dot is one garment of the customer.

2. **Tap anywhere**

   The warp starts and two doors appear.

3. **Customer review**

   For account managers and customers. Opens the review.

4. **Workshop**

   For workers. Opens the package room.

Tip: Press Esc to go back. A phone scan skips the doors and plays its story directly. After 90 seconds with no use, the start screen comes back.

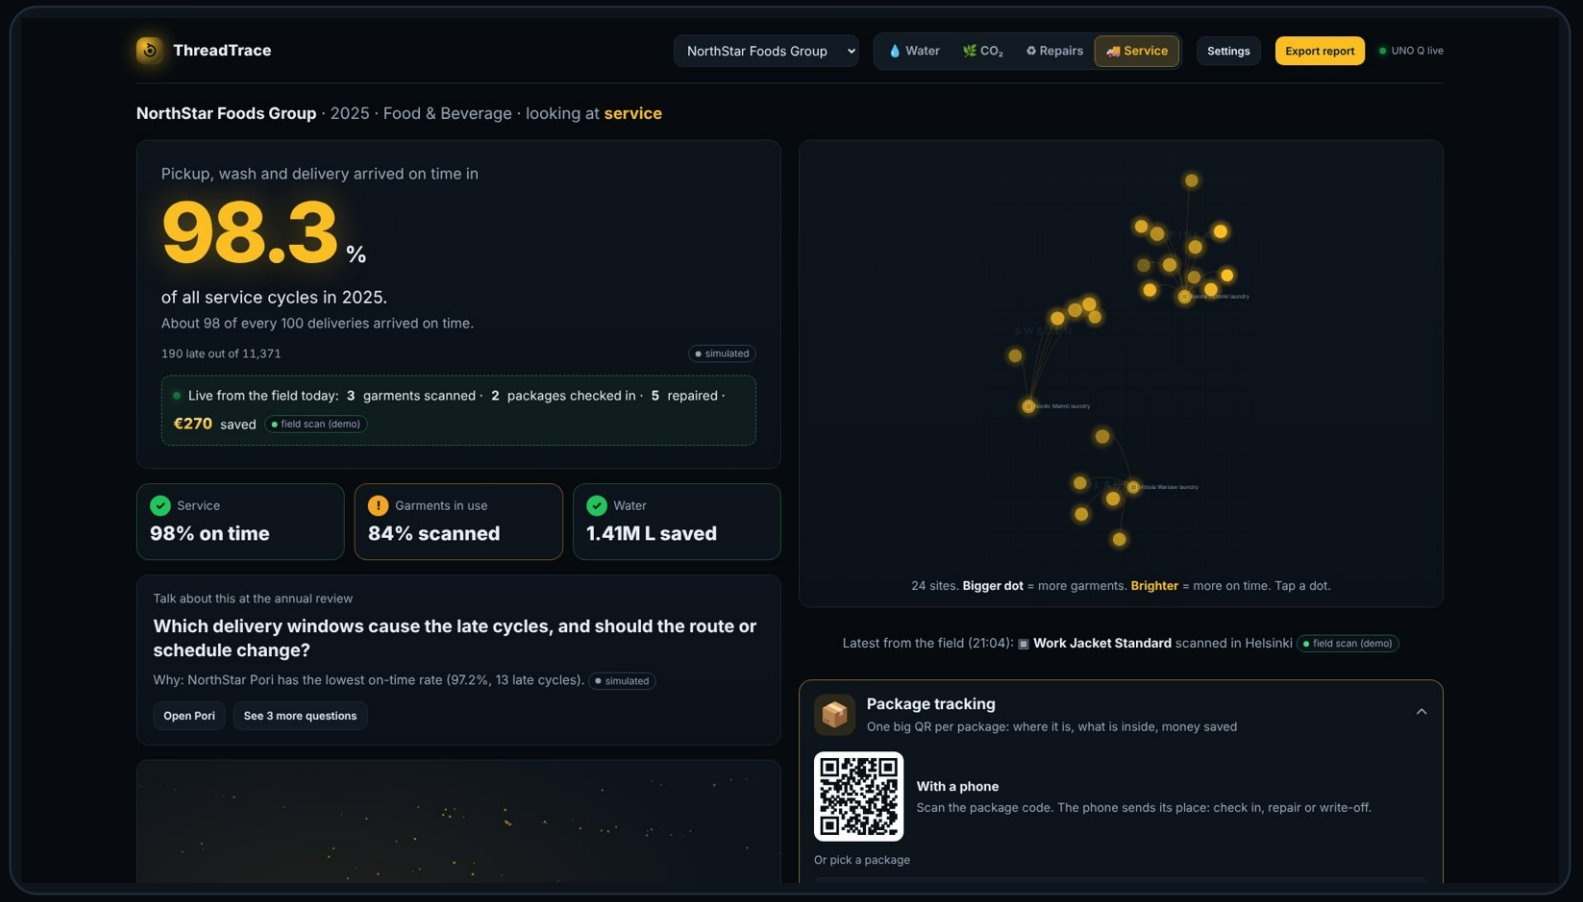

The review: one screen, one focus

1. **Big number**
   The main result for this customer, with a range.
2. **Live from the field**
   What phones did today. Money is always gold.
3. **Three lights**
   Service, garments in use, sustainability.
4. **Question card**
   A question to ask in the meeting.
5. **Map**
   All sites. Tap a dot to open a site.

Tip: Scroll down for “More numbers and sources”: tiles, chart, all questions and all field events.

Choose what matters to the customer

1. **Pick a customer**

   Top menu: NorthStar, Apex or Mediora.

2. **Pick a priority**

   Water, CO_2, Repairs or Service. Everything on screen changes.

3. **Smart default**

   Food → water. Factory → repairs. Hospital → service.

4. **Settings**

   Change the baseline and add contract KPIs.

Package tracking on the big screen

Check-in

Produced → delivered → where it is now, and how many garments are inside.

Repair

Money saved = repaired garments × price of a new garment, in gold.

Tip: No phone? Open “Package tracking”, pick a package and press “Quick check-in”.

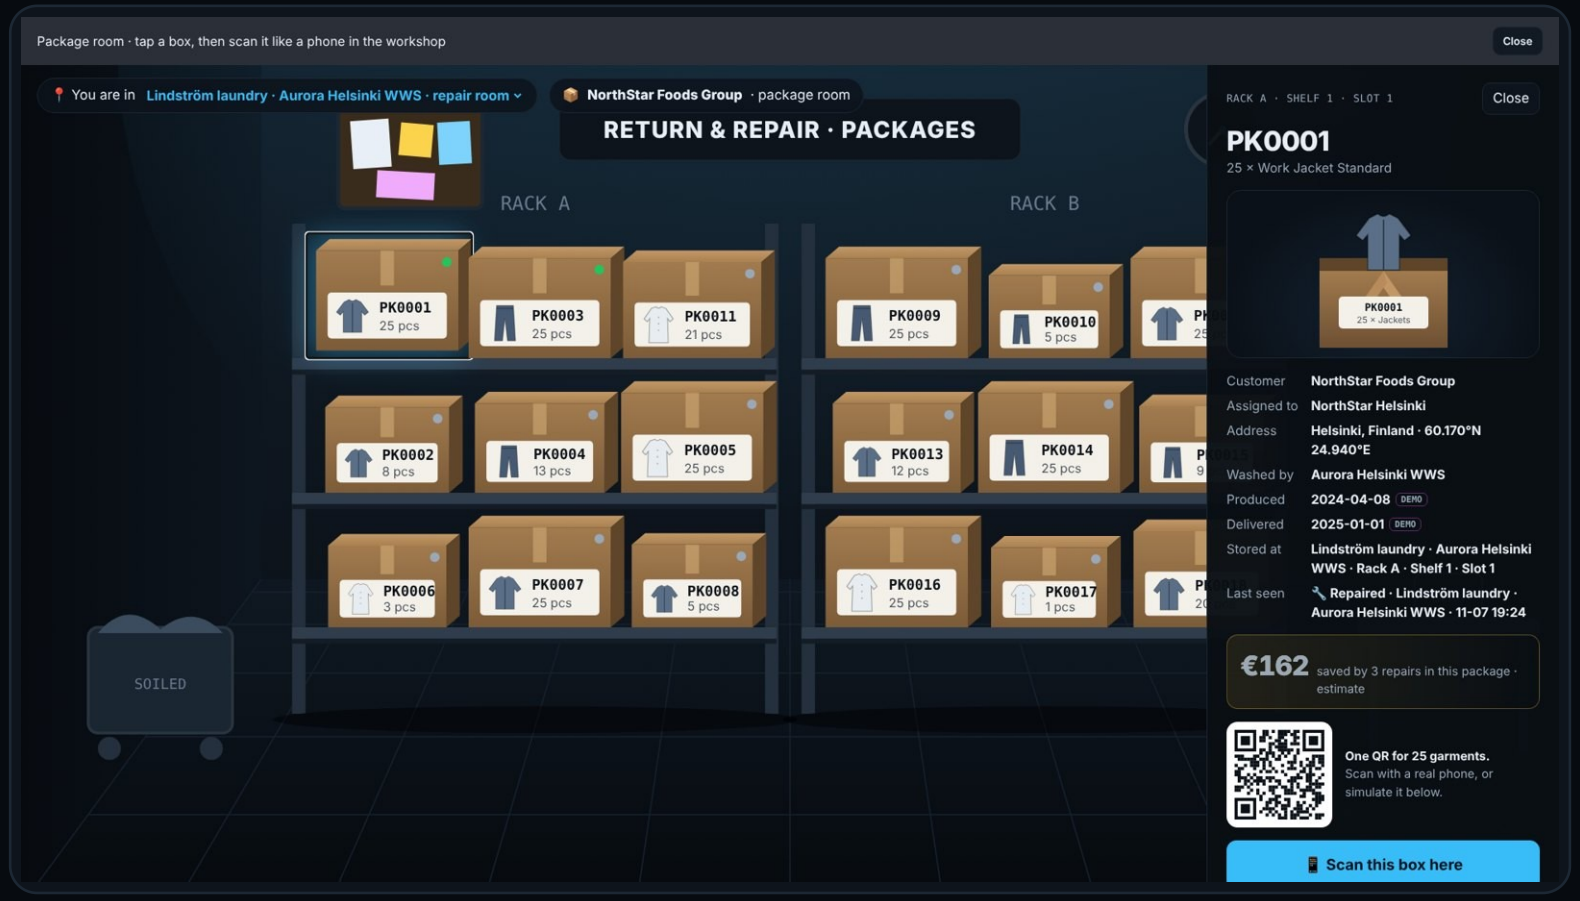

One garment, then the whole customer

1. **Scan a garment QR**
   Or open “Single garment” and press “Play”.
2. **Garment**
   Wash cycles, on-time deliveries, water saved.
3. **Site**
   Its site among all sites.
4. **Account**
   The whole customer on the map.

Tip: Click to go to the next step. The story ends on the site page.

Workshop: the package room

1. **Say where you are**
   Top left: laundry or customer site.

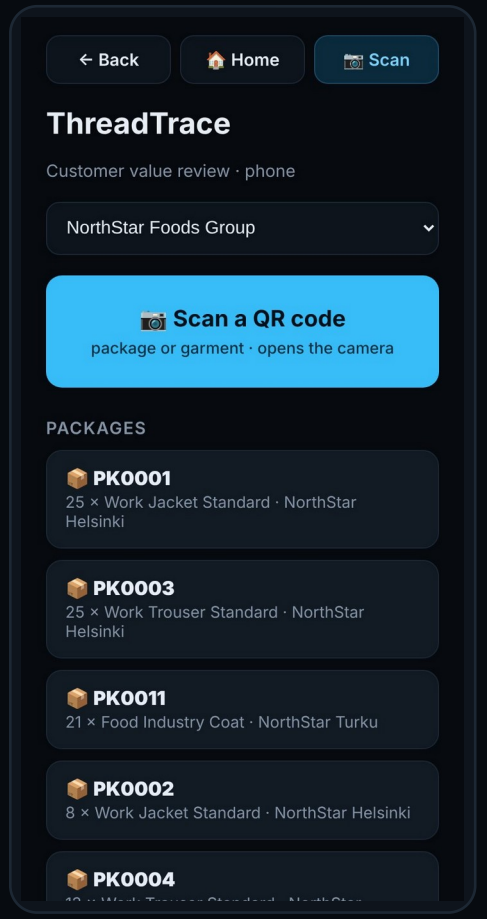

2. **Tap a box**
   It opens: garment, QR code, place and history.

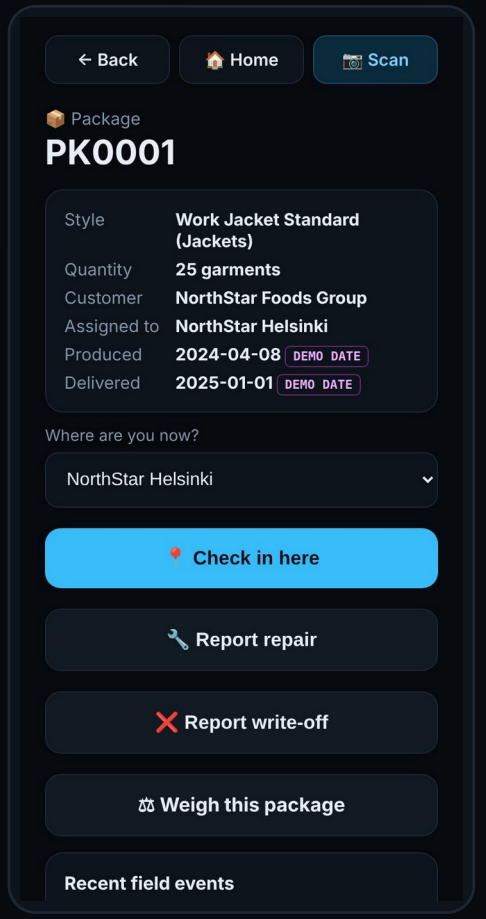

3. **Scan this box here**
   A phone scan is simulated. The big screen shows the journey.

4. **Repair or write off**
   Use the two small buttons.

Tip: Open it from the Workshop door, the “Open the package room” button, or the key P.

Phone: the start page

1. **Open /m on the phone**

   Address: the board address + /m. Or scan any QR card.

2. **Scan a QR code**

   Opens the camera. Take a photo of the QR. The right page opens.

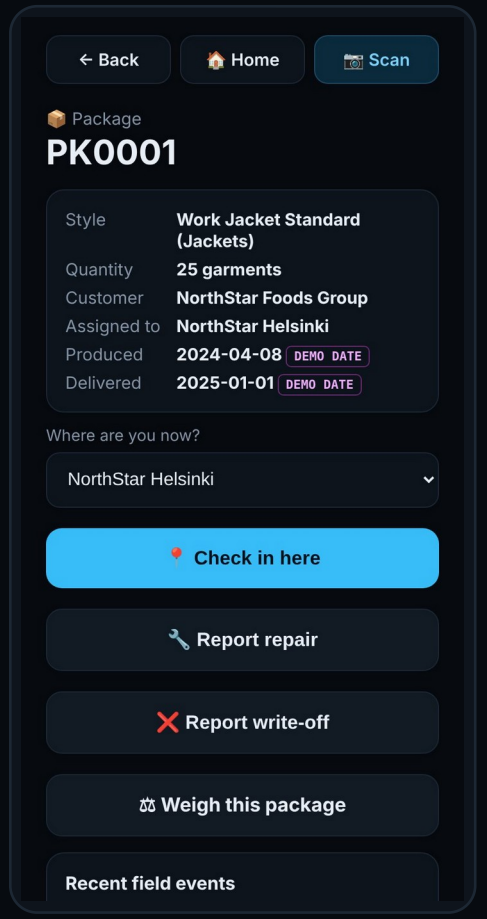

3. **Or pick a package**

   The list shows the packages of the customer.

4. **Never stuck**

   Every phone page has Back, Home and Scan at the top.

Phone: check in, repair, write off

1. **Where are you now?**
   Choose the place from the list.

2. **Check in here**
   Saves the place and time for the whole package.

3. **Report repair**
   Type the number of garments and the repair type. Shows € saved.

4. **Report write-off**
   Type the number and the reason (worn out, damaged, lost).

Phone: weigh a bag or a package

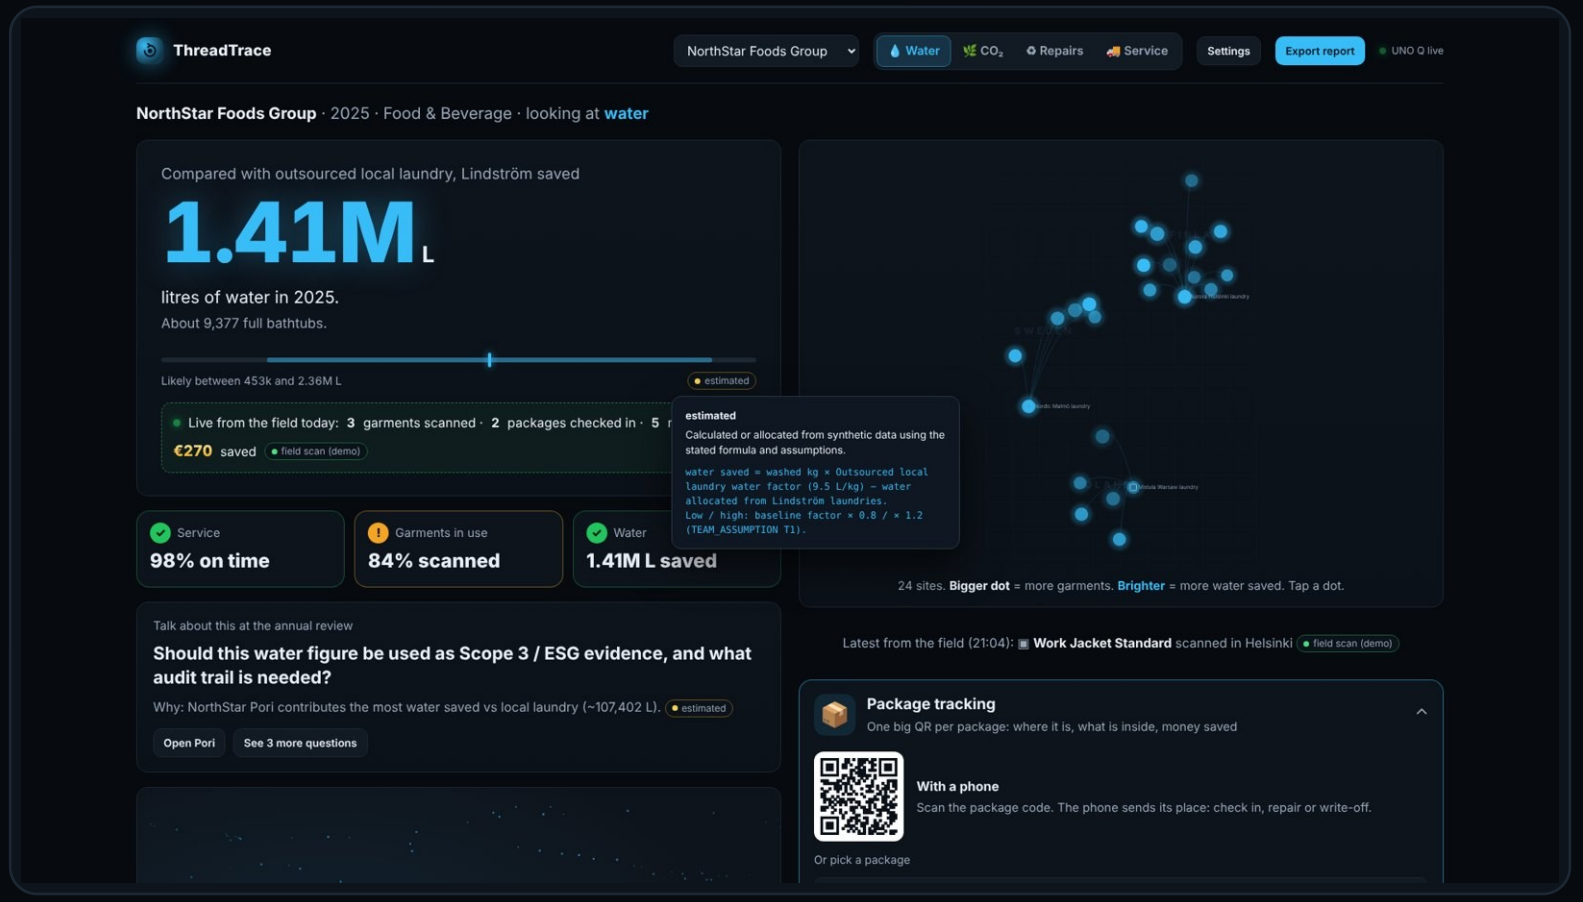

No real scale? Open “Weigh-in → Open the scale” on the big screen: a simulated scale.

1. **Open the weigh-in**
   “Weigh this package” on a package page, or “Weigh-in” on /m.
2. **Take a photo of the scale**
   Gemini reads the weight.
3. **Or type the weight**
   If Gemini is busy. The result is the same.
4. **See the water saved**
   The big screen and the phone show it.

Check where a number comes from

1. **Find a label**

   Small tags like “estimated” next to numbers.

2. **Click it**

   You see the meaning and the formula.

3. **Read the range**

   Low / base / high, so nobody over-claims.

- Simulated
- Estimated
- Team assumption
- Public reference
- Field scan

ThreadTrace · Customer Value & Sustainability Review · 2026-11-07

NorthStar Foods Group — 2025 annual review

Food & Beverage · Strategic High Value · 24 delivery sites · compared with: Outsourced local laundry · priority view: Water saved

All customer, site and operational figures are synthetic/illustrative (Lindström x Since AI data pack). Not audited; not an approved customer claim.

1. Account health

Area	Status	Value
Overall	amber	[TEAM_ASSUMPTION] thresholds T3
Service performance	green	98.3% cycles on time [SIMULATED]
Service adoption	amber	84.0% of allocated garments with scan activity [ESTIMATED]
Sustainability value	green	1,406,483 L water saved [ESTIMATED]

2. Value created in 2025

Indicator	Low	Base	High	Status
Water saved vs Outsourced local laundry (L)	452,541	**1,406,483**	2,360,425	[ESTIMATED]
CO_2e saved vs Outsourced local laundry (kg)	189,302	**255,074**	320,846	[ESTIMATED]
CO_2e avoided by repairs (kg)	112,126	**224,252**	336,378	[ESTIMATED]
Purchase cost avoided by repairs (€)	330,041	**€660,082**	990,123	[ESTIMATED]

Operations	2025
Garments tracked (scan history)	2,127 [SIMULATED]
Active wearers (Dec)	28,367 [SIMULATED]
Washed kg	502,075 [SIMULATED]
Service cycles · on time · avg turnaround	11,371 · 98.3% · 82 h [SIMULATED]
Repairs completed	15,233 [SIMULATED]
Service requests	515 [SIMULATED]

1. **Export report**

   Top right of the review.

2. **Read it**

   Account health, value, field evidence, assumptions and limits.

3. **Save as PDF**

   Blue button. Choose “Save as PDF” in the print window.

4. **Back to the review**

   Top left button, or Esc.

Quick reference

Key	What it does
A	Start screen on / off
S	Simulate a garment scan
W	Simulate a weigh-in
P	Open the package room
Esc	Close / go back

Address	Page
`/`	Big screen (review)
`/m`	Phone start page
`/p/PK0001`	Package page
`/weigh`	Weigh-in
`/cards`	Print QR cards
`/warehouse.html`	Package room

Start the board: `cd ~/threadtrace && git pull && board/run.sh`
Phone cannot open a page? Turn on Tailscale on the phone. Green dot “UNO Q live” at the top = the screen gets live events.
