NorthStar Foods Group — 2025 annual review

Food & Beverage · Strategic High Value · 24 delivery sites · compared with: Outsourced local laundry · priority view: Water saved

All customer, site and operational figures are synthetic/illustrative (Lindström x Since AI data pack). Not audited; not an approved customer claim.

1. Account health

Area	Status	Value
Overall	amber	[TEAM_ASSUMPTION] thresholds T3
Service performance	green	98.3% cycles on time [SIMULATED]
Service adoption	amber	84.0% of allocated garments with scan activity [ESTIMATED]
Sustainability value	green	1,406,483 L water saved [ESTIMATED]

2. Value created in 2025

Indicator	Low	Base	High	Status
Water saved vs Outsourced local laundry (L)	452,541	**1,406,483**	2,360,425	[ESTIMATED]
CO_2e saved vs Outsourced local laundry (kg)	189,302	**255,074**	320,846	[ESTIMATED]
CO_2e avoided by repairs (kg)	112,126	**224,252**	336,378	[ESTIMATED]
Purchase cost avoided by repairs (€)	330,041	**660,082**	990,123	[ESTIMATED]

Operations	2025
Garments tracked (scan history)	2,127 [SIMULATED]
Active wearers (Dec)	28,367 [SIMULATED]
Washed kg	502,075 [SIMULATED]
Service cycles · on time · avg turnaround	11,371 · 98.3% · 82 h [SIMULATED]
Repairs completed	15,233 [SIMULATED]
Service requests	515 [SIMULATED]
Allocated garments with no scan activity (avg / month)	5,065 — a signal to investigate, not proof of idle garments [ESTIMATED]
Textile waste allocated to the account	16,797 kg [ESTIMATED]

3. Questions for the steering committee

Observation	Question
NorthStar Västerås has the lowest scan-activity share (80.5%): about 153 allocated garments a month show no scan activity. [ESTIMATED]	Is the garment allocation at this site still right-sized, or are pickups being missed?
NorthStar Pori has the lowest on-time rate (97.2%, 13 late cycles). [SIMULATED]	Which delivery windows cause the late cycles, and should the route or schedule change?
NorthStar Gothenburg has the highest repair intensity (1056 repairs). Repairs postponed an estimated 7,832-23,495 kg CO2e of new garments. [ESTIMATED]	Are the repairs concentrated in one product or task, and would a sturdier garment pay back?
NorthStar Pori contributes the most water saved vs local laundry (~107,402 L). [ESTIMATED]	Should this water figure be used as Scope 3 / ESG evidence, and what audit trail is needed?

Site drill-down (sorted by water saved)

Site	Garments	On time	No scan / mo	Water saved (L)	CO_2e saved (kg)	Repairs
NorthStar Pori	88	97.2%	378	107,402	20,941	1,146
NorthStar Uppsala	99	98.7%	348	100,142	19,202	1,011
NorthStar Helsinki	99	98.2%	327	100,110	19,722	1,017
NorthStar Vaasa	78	98.7%	293	95,192	18,595	1,055
NorthStar Gothenburg	82	97.7%	333	94,086	18,018	1,056
NorthStar Malmö	92	98.1%	282	89,283	16,855	922
NorthStar Kuopio	88	99.4%	331	81,603	16,411	925
NorthStar Jyväskylä	97	98.3%	305	73,743	14,631	851
NorthStar Kraków	84	98.2%	224	67,802	7,973	805
NorthStar Seinäjoki	109	98.1%	221	67,467	12,867	726
NorthStar Wrocław	87	98.3%	259	65,350	7,657	796
NorthStar Turku	81	99.1%	252	63,041	12,343	667
NorthStar Lappeenranta	65	99.4%	231	56,894	11,012	612
NorthStar Örebro	96	98.7%	194	54,620	10,328	569
NorthStar Stockholm	78	98.3%	140	44,422	8,837	462
NorthStar Kotka	86	99.1%	167	43,677	8,621	462
NorthStar Västerås	106	98.2%	153	36,039	7,080	342
NorthStar Poznań	77	98.1%	139	35,377	4,114	410
NorthStar Warsaw	79	97.9%	127	29,014	3,400	334
NorthStar Lahti	81	97.8%	95	27,342	5,397	286
NorthStar Łódź	97	98.5%	90	25,822	2,884	277
NorthStar Oulu	78	97.9%	92	21,986	4,308	236
NorthStar Gdańsk	103	97.8%	45	15,267	1,786	166
NorthStar Tampere	97	98.3%	40	10,800	2,091	100

Method, assumptions and limitations

ID	Assumption	Rule	Source / confidence
A001	Default comparison baseline	Outsourced local laundry	DATA_PACK · Medium

A002	Repair handprint	1 completed repair postpones 1 replacement event	DATA_PACK · Low-Medium
A003	Waste attribution	Laundry waste allocated by customer share of washed kg	DATA_PACK · Medium
A004	Waste baseline	100% mixed-waste treatment in baseline	DATA_PACK · Low-Medium
A005	Product footprint	Synthetic kgCO2e values by product	DATA_PACK · Low
A006	Customer hierarchy	Synthetic parent customer/site hierarchy	DATA_PACK · High
A007	Industry emphasis	Rules use customer industry and stated priority	DATA_PACK · Medium
A008	Data status	Every output retains source/status label	DATA_PACK · High
T1	Baseline factor uncertainty	Comparison-baseline water and CO2e factors varied -20% / +20% for low / high.	TEAM_ASSUMPTION · Team
T2	Repair postponement range	Low / base / high = 0.5 / 1.0 / 1.5 replacements postponed per repair (pack default A002 = 1.0).	TEAM_ASSUMPTION · Team
T3	Scorecard thresholds	On-time green >= 98%, amber >= 95%. Scan-activity share green >= 85%, amber >= 75%.	TEAM_ASSUMPTION · Team
T4	Allocated garments with no scan activity	allocated - scanned. An optimisation signal to investigate, not proof of idle garments.	LINDSTROM_GUIDANCE · Medium
T5	Weigh-in at the return point	Returned kg x laundry water/CO2e factor vs kg x baseline factor. Demo capture; real washed kg is measured at the laundry.	TEAM_ASSUMPTION · Demo

Context `[PUBLIC_REFERENCE]`**:** Lindström emissions intensity is about 13% lower than the textile-rental peer average. Company emissions intensity, kg CO2e per EUR turnover (Angad, Discord, 7 Nov 2026).

Limitations: customer hierarchy, site mapping and all operational values are synthetic; waste and laundry impacts are allocated by share of washed kg; cost savings beyond avoided purchases are not evidenced in the data; field scans and weigh-ins are demo captures (QR codes stand in for UHF RFID).
